The pitch of a plane is 0.25, and the coefficient of friction between a certain body and the plane is 0.35. Will the body, if placed on the plane, slide down or remain at rest? What will be the friction force exerted? Exercise 124. A weight rests on a smooth inclined plane. Show that the least force which will keep it in equilibrium must act along the plane. (Assume a force acting at an angle 0 with the plane and show that 0 is zero for a minimum force.) Exercise 125. Two unequal weights Wi and W2 on a rough inclined plane are connected by a string which passes over a smooth pulley in the plane. Find the greatest inclination of the plane consistent with equilibrium, in terms of W, W2, and the coefficients of friction fii and fi2. Exercise 126. Two rough bodies Wi and W2 rest upon an inclined plane and are connected by a string parallel to the plane. If the coefficient of friction is not the same for both, determine the greatest inclination and the tension of the string, consistent with equilibrium, in terms of Wi, W2, and the coefficients of friction m and fi2. The Wedge This machine consists of a double inclined plane made of some hard material, such as iron or steel. It is used for splitting wood, or overcoming great resistances over short distances. In Fig. 93, ABC represents a wedge. The applied...
