A. 2s. 1902. (Macmillan.) This little book seems to be intended for the teacher and not for the pupil. In these days, when there is some prospect of being freed from the fetters of Euclid, such a book should be welcomed by those who are considering the future of geometrical teaching. Not the least valuable part of the book is the admirable preface. There we find an eloquent plea for the abandonment of Euclid, and for the separation of the course of theorems from that of constructions. The definitions and the notes thereupon are carefully done. One may not agree with all the details, but the general idea is very...
