Construct the figure, and prove that one of the given triangles is equal to the sum of the other two. 32. If A be the point of intersection of the diagonals of a parallelogram, then every straight line drawn through A will meet opposite sides of the parallelogram in points equidistant from A, and will divide the parallelogram into two equal parts. 33. A quadrilateral being formed by joining the middle points of the adjacent sides of a rectangle, investigate what kind of a quadrilateral it is. 34. Prove that a quadrilateral which has two opposite sides parallel, is equal in area to a rectangle between the same parallels on a base equal to half the sum of the parallel sides of the given quadrilateral. 35. From any point in one of the sides of a triangle draw...
